Colored links

Colored links with hover states

You can use the `.link-*` classes to colorize links. Unlike the `.text-*` classes, these classes have a `:hover` and `:focus` state.

[Primary link](#) [Secondary link](#) [Success link](#) [Danger link](#) [Warning link](#) [Info link](#) Light link [Dark link](#)

```html
<a href="#" class="link-primary">Primary link</a>
<a href="#" class="link-secondary">Secondary link</a>
<a href="#" class="link-success">Success link</a>
<a href="#" class="link-danger">Danger link</a>
<a href="#" class="link-warning">Warning link</a>
<a href="#" class="link-info">Info link</a>
<a href="#" class="link-light">Light link</a>
<a href="#" class="link-dark">Dark link</a>
```

Some of the link styles use a relatively light foreground color, and should only be used on a dark background in order to have sufficient contrast.

B Bootstrap

Designed and built with all the love in the world by the Bootstrap team with the help of our contributors.

Code licensed MIT, docs CC BY 3.0.

Currently v5.0.2.
